# Ocookies without HttpOnly flag set

Severity	Low
Reported by module	/RPA/Cookie_Without_HttpOnly.js

#### **Description**

One or more cookies don't have the HttpOnly flag set. When a cookie is set with the HttpOnly flag, it instructs the browser that the cookie can only be accessed by the server and not by client-side scripts. This is an important security protection for session cookies.

#### **Impact**

Cookies can be accessed by client-side scripts.

#### Recommendation

If possible, you should set the HttpOnly flag for these cookies.

#### Affected items

#### **Web Server**

Verified vulnerability

Details

Cookies without HttpOnly flag set:

· https://github.com/

Set-Cookie: octo=GH1.1.803169092.1660425493; Path=/; Domain=github.com; Expires=Sun,

### Request headers

```

Connection: Keep-alive

# ① Insecure Inline Frame (iframe)

Severity	Low
Reported by module	/httpdata/iframe_sandbox.js

#### **Description**

The web page was found to be using an Inline Frame ("iframe") to embed a resource, such as a different web page. The Inline Frame is either configured insecurely, or not as securely as expected. This vulnerability alert is based on the origin of the embedded resource and the iframe's sandbox attribute, which can be used to apply security restrictions as well as exceptions to these restrictions.

#### **Impact**

When a web page uses an insecurely configured iframe to embed another web page, the latter may manipulate the former, and trick its visitors into performing unwanted actions.

#### Recommendation

Review the iframe's purpose and environment, and use the sandbox attribute to secure the iframe while applying sandbox directives to ease security restrictions if necessary.

#### References

MDN | iframe: The Inline Frame Element (https://developer.mozilla.org/en-US/docs/Web/HTML/Element/iframe) 
HTML Standard: iframe (https://html.spec.whatwg.org/multipage/iframe-embed-object.html#the-iframe-element) 
HTML 5.2: 4.7. Embedded content (https://www.w3.org/TR/html52/semantics-embedded-content.html#element-attrdef-iframe-sandbox)

#### Affected items

## /password\_reset

Verified vulnerability

**Details** 

An iframe tag references an external resource, and no sandbox attribute is set.

Request headers

POST /password reset HTTP/1.1

Content-Type: application/x-www-form-urlencoded

Referer: https://github.com/password reset

#### Cookie:

#### © Email addresses

Severity	Informational
Reported by module	/httpdata/text_search.js

# **Description**

One or more email addresses have been found on this website. The majority of spam comes from email addresses harvested off the internet. The spam-bots (also known as email harvesters and email extractors) are programs that scour the internet looking for email addresses on any website they come across. Spambot programs look for strings like myname@mydomain.com and then record any addresses found.

#### **Impact**

Email addresses posted on Web sites may attract spam.

#### Recommendation

Check references for details on how to solve this problem.

#### References

Anti-spam techniques (https://en.wikipedia.org/wiki/Anti-spam\_techniques)

#### Affected items

#### **Web Server**

# Insecure Referrer Policy

Severity	Informational
Reported by module	/httpdata/insecure_referrer_policy.js

#### **Description**

Referrer Policy controls behaviour of the Referer header, which indicates the origin or web page URL the request was made from. The web application uses insecure Referrer Policy configuration that may leak user's information to third-party sites.

#### **Impact**

In some situations, an attacker may leak a user's private data

#### Recommendation

Consider setting Referrer-Policy header to 'strict-origin-when-cross-origin' or a stricter value

#### References

Referrer-Policy (https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/Referrer-Policy)

#### Affected items

#### **Web Server**

#### **Details**

URLs where Referrer Policy configuration is insecure:

# 1 Password type input with auto-complete enabled

Severity	Informational
Reported by module	/Crawler/12-Crawler_Password_Input_Autocomplete.js

#### **Description**

When a new name and password is entered in a form and the form is submitted, the browser asks if the password should be saved. Thereafter when the form is displayed, the name and password are filled in automatically or are completed as the name is entered. An attacker with local access could obtain the cleartext password from the browser cache.

#### **Impact**

Possible sensitive information disclosure.

#### Recommendation

The password auto-complete should be disabled in sensitive applications.

To disable auto-complete, you may use a code similar to:

<INPUT TYPE="password" AUTOCOMPLETE="off">

#### Affected items

#### **Web Server**

Details

Pages with auto-complete password inputs:

• https://github.com/login

Form name: <empty>
Form action: /session
Form method: POST

Password input: password

## Request headers

GET /login?return to=https://github.com/npm/cli HTTP/1.1

Referer: https://github.com/npm/cli
